Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. As the product is a mixture of several substances, the resistance of glove materials cannot be calculated in advance and must therefore be checked before use. Use chemical resistant gloves, e.g. protective gloves made of nitrile (layer thickness 0.4mm).  
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- **Material of gloves**

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
