## PRODUCT INFORMATION

**Product name:** PERFORMANCE SAFETY TROUSER A/O

**Article number:** XX71234

**Product category:** Textiles, clothing and footwear

**Product description:** The KOX Performance cut protection trousers combine Cordura with bio-based Dyneema fibres, which come from the wood and pulp industry and have a 90% lower CO<sub>2</sub> footprint than conventional synthetic fibres. Dyneema is characterized by exceptional cut and abrasion resistance as well as high resistance to fuels, oils and UV radiation, which makes the pants particularly robust and ideal for forestry. With a modern cut, 4-way stretch, adjustable waistband and coated knee patch, the KOX Performance offers high flexibility and comfort with maximum protection. Material outer fabric: 62 % polyamide, 38 % bio-based Black Dyneema Lining: 100 % polyethylene terphthalate

**Warnings / Warning icons:** Cut-resistant trousers only provide protection for the areas that are reinforced with cut-resistant material (usually the front of the legs). They do not protect against cuts on other parts of the body. The cut protection of the pants is not absolute. Cut-resistant trousers reduce the risk of injury, but do not offer complete protection against chainsaw cuts and are limited in their protective effect to certain chain speeds and forces. The pants are designed for use with handheld chainsaws. It is not suitable for protection in other activities. Instruction and training in the safe use of the equipment and chainsaw are required. The protective effect can be impaired by improper care or damage. It is recommended to follow the manufacturer's instructions for care (e.g. washing instructions, temperature specifications). Damaged or worn trousers must not be used. Cracks, holes or visible wear and tear can impair the protective effect. Cut protection trousers have a limited lifespan. Material fatigue due to aging and frequent use can reduce the protective performance. The pants must fit correctly to provide optimal protection. Cut protection trousers are part of personal protective equipment (PPE) and should be used in combination with other protective measures (e.g. safety shoes, safety helmet with visor, gloves).

**Test standards/certifications:** EN ISO 11393-2:2019 published in the Official Journal of the European Union. EN ISO 11393-2:2019, Form A, Class 1 Protection area over the entire front of the trouser legs and additionally plus 50 mm on the outside of the left leg.
