## PRODUCT INFORMATION

**Product name:** KOX UNO DARK BLUE

**Article number:** XX73123

**Product category:** Textiles, clothing and footwear

**Product description:** The KOX UNO is a comfortable cut protection boot in class 1 (20 m/s) for easy to medium terrain. The forestry boot has many practical features such as a non-slip rubber sole, breathable inner lining without membrane and the heel element made of TPU for better stability. The KOX UNO is also made of hydrophobic cowhide. The advantage: The upper leather is water-repellent and particularly robust.

### Warnings / Warning icons:

Cut protection boots do not offer complete protection against injuries, but reduce the risk. The cut protection class indicates the protection speed (e.g. 20, 24 or 28 m/s). If the chain speed exceeds this value, the boots may not provide sufficient protection. Clean and dry the boots regularly, but avoid direct exposure to heat, as this can damage the materials. Use the care products recommended by the manufacturer to keep the materials water-repellent and flexible. Despite slip resistance (e.g. SRC-approved soles), wearing the boots on slippery or uneven surfaces can still pose a risk. Walk carefully and avoid smooth or loose surfaces if possible. Always wear cut-resistant boots in combination with other personal protective equipment (PPE) such as cut-resistant trousers, helmet, gloves and goggles to ensure the most complete protection. The boots must be laced correctly and sit firmly on the foot to guarantee the protective effect. Loose-fitting boots can cause tripping or inadequate protection. Use cut-resistant boots only in intended areas of use and work environments. Read and follow the manufacturer's instructions for use and instructions. This gives special advice on the use, care and replacement of the boots in order to maintain the protective effect.

### Test standards/certifications:

EN ISO 20345:2011 S3 CI HI HRO SRC

EN ISO 17249:2013, class 1 (20 m/s)

## MANUFACTURER INFORMATION
